Map legend - placer gold trap zones, process 1.2

Area: Aorere_River_A. Applies to the numbered map, the KMZ and the GeoJSON/CSV files of this run.

Symbol	Meaning
	High priority trap zone: score 3+ with 2+ trap indicators overlapping
	Moderate trap zone
	Bench / terrace remnant above a channel
	! inside a zone: a gossan lies in the zone's watershed or directly upslope (it drains into or through the zone; CSV says which)
	Channel network from the DEM
	Gossan: ferric-iron anomaly on natural ground (satellite screening, method GS0.7: man-made, water-edge and terrain-shadow filters); not mainly on cropland; in New Zealand anomalies on mine ground are kept
	KMZ only: purple outline = NZ public Gold Fossicking Area or land-status area (reserved / excluded land)
KMZ layers	KMZ only: iron-anomaly score heat map (blue low, yellow, red high; grey hatch = never seen as bare ground)
Numbers	Zone numbers match the CSV, GeoJSON and KMZ

This run: 8 zones; gossans 0;

Zones are places worth testing from landform alone, not evidence of gold. Gossans are remote-sensing screening layers; verify on the ground. Check land access, landowner consent and permits before any fieldwork.
